Meeting Notes with Joyce - Project Update: September 4, Wednesday

Key Discussion Points:

1. **Project Direction Change:**
   - **Joyce** mentioned the need to clarify with **Kristy** about the change in the project's direction towards data visualization.
   - It is important to ensure that Kristy is fully aware of this shift in focus and is aligned with the new approach.
2. **Final Report Considerations:**
   - Even though the **prediction results** of the project may not be favorable, we must still address them in the final report.
   - The final report should include **suggestions and recommendations** for those who may continue this project in the future.
   - This will provide valuable insights and guidance, especially for improving the predictive model.
3. **Emphasis on Data Visualization:**
   - Data visualization is considered a relatively **straightforward** task, but it needs to tell a coherent and compelling story.
   - The report should clearly explain the **journey** from the beginning to the end, highlighting why the **prediction results** were not as expected.
4. **Storytelling and Addressing Limitations:**
   - We need to present a **narrative** that explains the reasons behind the limitations of the prediction model.
   - Key points to include:
     - **Challenges** faced in achieving better prediction accuracy.
     - **Limitations** of the data, methodology, or tools used.
     - Any other factors contributing to the less-than-ideal results.
   - The final report should offer **constructive feedback** and possible areas for future improvement.

Action Items:

- **Joyce** will communicate with **Kristy** to ensure clarity on the project's shift towards data visualization.
- The team will focus on building a clear **narrative** around the prediction results and visualization for the final report.
