Monday, Apr 29, 2024
Time: 10:00 - 11:00 pm
Venue: Melbourne Connect

Meeting Attendees:
- Mario Andres Munoz Acosta
- Kaifan Ouyang
- Xuheng Li
- Yuqian Xie
- Harsh Mangla

Discussion Points:
1. Progress on our initial data analysis shows a relationship between milk production and lactation days. However, we are encountering issues with processing variables of different data types and handling missing data.
2. Discussion on whether the paper we found is suitable—considerations should include the number of citations and the publication year, ideally within the last five years.
3. Review the terminology annotations.
4. Examine our project status report.

Action Items:
- Review the terminology annotation with our host to ensure it is contextually appropriate.
- Discuss our findings, particularly the correlation observed, with our host and inquire about their preferred methods for handling missing data.
- Continue searching for relevant papers, and consider if our host has any recommendations. Decide whether to follow the methodology from one paper or to explore various models from multiple papers.

Next Steps:
- Prepare a summary report about our recent progress: first, send it to the supervisor for feedback, then forward it to the host.
- Create a Slack channel to facilitate ongoing communication (consider including the supervisor in our group chat on Slack).
- Proceed with the action items as planned.
